Quantumnition: Ski Lift Notes Regarding The Observer Effect On Future Streams Benjamin L. Owen
"The distinction between the past, present and future is only a stubbornly persistent illusion." - Albert Einstein

Outlaw quantum physicist Johnny Twain believes he can see a stark future - a post-war world where humans are extinct. He must fight his own war - against his government, against his conscious, and against reality...

Brian Nyx savored the moment, sitting down next to his patient - prisoner! - a pestering voice somewhere in his mind chirped. He settled into the light brown, soft leather chair with uninterrupted time to actually relax, read, and begin to learn the many whats, whys, and reasons for the thousands of carefully tangled circuits he had personally tucked into the reaches of Johnny Twain's skull.

He mentally listed and itemized the basic questions he wanted to answer. Who was Johnny Twain? What had he done? Who had he pissed off to make the united states government so determined to crack apart his mind? Why had he been personally assigned to peel away every layer of Johnny Twain's ego and soul?

When he was done, Twain would likely be ruined. He would live trapped inside a mind that could not be trusted. In some future time, weeks or months away, Johnny Twain's eyes would probably have the soft, uneven blink of insanity.

"Quantumnition is mind-bending!" - The New York Messenger

Let me just cut to the chase. Lots of stuff happens. Lots of stuff doesn't happen. Men cheat on and treat their wives abysmally, but it is really their wives' faults.

We have the technology to see what a criminal mastermind has going on in his brain, but, he might not be a criminal mastermind. He might be the savior of the world.

(If we can see what's going on in his mind, why can't we tell whether he is working toward a nefarious end or an altruistic one?)

And then New York City blows up.

I received this book free in exchange for an honest review.

I have got to be more discriminating about the books I take for free.

A must read!

This is a very powerful book. If you find yourself attracted to intelligent stories, of the likes of the movie Inception, you will love this one. The quotes at the beginning of each chapter are a clever insight of what's to come, I found them very enjoyable. The writing is masterful, the characters are easily to relate to and this book is a perspective changer. I don't want to give too much away but this is definitely something everyone should read. Once you start reading, it's impossible to put down, you find yourself part of the characters lives and you get to see why they fell the way they do, and how they react to one specific event in someone's mind. Someone who was not altogether a bad person, but did something very bad indeed while thinking that he was doing what was right. This is what makes a book great.

I received my copy thanks a Goodreads giveaway. That being said I have to say that there are Some novels you read because they provide you with mindless entertainment. They are a form of escape. This is not one of those novels. You will become completely engrossed in reading this sci-fi/psychological thriller. It will leave you questioning your own perceptions of life, reality, the frailty of being, and the capabilities of the

human mind.

I know that the first thing anyone who starts to read this novel is going to do is scream and rant about the typographical and grammatical errors. Get past it, or you are going to miss out on a very good read. The story lines and characters are thought provoking. It is an exploration of reality, our perceptions of right and wrong, and our attempts to moves past those perceptions to a greater understanding of the forces that make up our universe, and how those forces truly work. I truly enjoyed this read.
