Helen Moses says

Puts together the current ideas in pedagogy and application. Reading this book has helped me frame teaching and technology.

Dave Moyer says

Excellent primer on leaderships strategies to create a future ready culture.

Tracey says

What a great book!

Eight Keys to Designing Tomorrow's Schools
1. Creating a Culture of Innovation
2. Redesigning the Learning Experience
3. Ensuring a Return on Instruction
4. Designing Learner-Centered Spaces
5. Making Professional Learning Personal
6. Leveraging Technology
7. Collaborating and Engaging with the Community
8. Leading the Charge

Notice anything?

Most of these ideas don't cost a dime! Transforming Learning is about looking at what you have and deciding if you are doing what you need to do with what you have to improve learning. Are you using your space right? Are you using your resources efficiently? Are you seeking community input? Does your staff have and mindset for innovation? Except for the technology aspect, there may be zero cost to transforming what you do. And regarding the technology consideration, how much additional technology could very well be evaluated before making such a commitment.

This book is great for teachers who wish to reinvent what they do in the classroom, as well as for an entire staff who may want to reinvent their entire school program! I highly recommend this book!

Inga says

Some interesting ideas. Nothing earth shattering, but helped me think about leadership in schools.
