New Small Houses (Loft Series) (French and German Edition) Florian Seidel , Simone Schleifer

This is a collection of 19 interesting examples demonstrating countless architectural solutions available for houses with minimal space. Owing to their proportions - often related to the budget - minimal houses tend to be based on a light structural system, generally based on wooden frames or thin metal sections, which also make the building easy to construct on isolated or inaccessible plots of land. These homes can hide ingenious elements inside, such as folding tables, hanging beds, translucent panels, and highly efficient storage areas. This collection of 19 new projects presents practical, contemporary examples that demonstrate the countless architectural solutions available for houses with minimal space.

Mark Bourne says

A lot of great ideas for your next small house. Keep your next new house small and enjoy a cheaper uncluttered existence which you can build in if need be. Give me a pod/s anyday.

This book is also in English.
