Yellow Death Alex Lettau

Because the war on drugs is not going well, DEA conspirators initiate a secret project mixing a lethal Venezuelan hepatitis virus into heroin, rationalizing that a few deaths from a new type of hepatitis will deter drug abuse in many.

When Dr. Kris Jensen, a medical detective with the CDC's hepatitis division, arrives in Mississippi to investigate rapidly fatal hepatitis in two drug users, she doesn't expect to become a victim.

Two days after an accidental needlestick, she realizes that she is now infected with this unknown lethal virus and has only five days left to find answers to its origin. Jensen's investigation takes her into the depths of a web of drug use and revenge murders, tracked by DEA assassins who are determined to keep her from discovering the truth.

I could definitely tell Yellow Death was written by a doctor. There were just enough clues to figure out what was going on. This was a thrilling ride from beginning to end.

Dr. Jensen was called to the fatal death of a drug user, and while taking a sample pricked her finger. She begins a search to find out how the virus came to Mississippi and how, hopefully, to stop it before she dies. Her search takes her to a remote village in Venezuela, to find the village where this particular strain of hepatitis began.

Yellow Death is full of humor, intrigue, death, gun fights, a crash or two and non-stop excitement. I would recommend this book to anyone looking for an adventure.

I was given a copy of Yellow Death by Alex Lettau in exchange for an honest review.

Exciting read

Exciting and enjoyable read. It kept you on the edge of your seat. I did not want to put it down.

Robert Grieco says

Honestly, this is one of the best books I've read in a very long time. Extremely interesting story with great characters. Whatever your favorite genre of reading, you can be certain there's something within that will "tickle your fancy." Not to mention there is an important lesson to be learned on the last page. This book will not disappoint. :)

While my experience in epidemiology is limited, I felt as though I was a researcher alongside the characters of Yellow Death by Alex Lettau. My mind swiftly generated thoughts for explanation as the plot unfolded in this infectious disease suspense novel.

The story begins as the protagonist, Dr. Kris Jensen, receives an unfortunate needle stick while investigating several suspicious deaths related to an unidentified fulminant hepatitis. As Dr. Jensen realizes she is in fact infected with this disease that is rapidly killing these patients, she embarks on a mission not just to identify the ailment, but to save herself. She makes helpful friends along the way, but also faces disastrous opposition from unsuspected enemies. Either friend or foe, character development is impeccable as each new face walks into the story, and you find yourself quickly pledging alliance to the cause.

As a registered nurse specializing in palliative care, I took particular interest in Lettau's descriptions and accounts of Dr. Jensen's thoughts as she contemplated her own mortality. She maintained a sense of humor,

and a sense of who she was. Her drive to feel fulfilled and accomplished rings loudly to me, which is such a realistic value to those who face serious illness or imminent death. People want their life to feel complete, and I believe that Dr. Jensen was striving for just that.

There are, however, many unanticipated obstacles that present to create barriers in Dr. Jensen's journey, and the thrill of suspense over what would happen next kept me wanting to read "just one more chapter" until the very end! I found myself gasping at some scenes, and laughing at the next; it was well-rounded and intriguing to say the very least. As cliché as it may sound, this is absolutely a must-read!

Richard Schwindt says

Alex Lettau is an veteran infectious disease specialist who has written a medical thriller. So far, so good. That being said, sometimes professionals who write thrillers about their field go off the rails; their stories are indulgent, poorly written, or cater to their various bias'.

Lettau, though, has crafted an excellent thriller that feels professional; in its prose, and communication of the story. Well written; it captures the reader quickly.

Doctor Kris Jensen is a young specialist called in by CDC to investigate a particularly horrific strain of hepatitis in the southern US. Things go bad right away when she is bumped into a needle stick by a clumsy colleague. Shortly after, she encounters a group of assassins who seem to be targeting her. Then it gets bad. This is a terrific book; Lettau has nailed the genre and produced the first of what one hopes is a long lived series. Kris Jensen is a charming and ethical protagonist. I enjoyed this so much that five stars is a no brainer, but one quibble; in the next Jensen novel it would be good to beef up a few of the secondary characters.

Best read by candlelight, with port and chicken soup, when you are sick with the flu.

Medical mystery

Great story, kept me interested right from the start, thought that there might be a part 2. If not, there should definitely be

Jill says

I was very impressed with Kris Jensen's novel, Yellow Death. It was full of mystery and intrigue and contained plenty of plot twists to make it extremely interesting. I had a difficult time putting this one down! I would highly recommend this book to anyone who enjoys medical thrillers or suspense novels. This one has it all!

Indiebrag says

We are proud to announce that YELLOW DEATH (Kris Jensen #1) by Alex Lettau is a B.R.A.G.Medallion Honoree. This tells a reader that this book is well worth their time and money!

Marie says

Great read!

Thoroughly enjoyed every moment of this book! Page turner that hooks you instantly and keeps you wrapped up in the plot until the last page!

Carrie says

Lots of medical jargon and plenty of action for hardcore medical thriller fans. Lettau takes you on a fast-paced journey from Mississippi to New Orleans to Venezuela, as a CDC investigator searches for the source--and treatment--of a rapidly fatal form of hepatitis. You'll want to be extra kind to your liver after this wild ride.

3/22/2006, Corham, Mississippi. Dr. Kristen "Kris" Jensen (30, U of Wisconsin, epidemiologist, CDC Hepatitis Division) was examining the bloated body of Junior Murphee (chronic hepatitis C infection) at the Stevens' health department.

Junior & his G/F LaDonna Fry (20) lived in the Dixie trailer park.

Kris had cut her finger while doing the examination.

Doc Calhoun did the autopsy on Billy Herman (21, chronic hepatitis C infection) who lived in Millerville Mississippi (town).

Kris & Dr. Dan Stevens (County Public Health Director) went to see LaDonna & Frankie Howell (drug addict).

Kris' next stop was to meet with Dr. Eduardo "Ed" Beaufain (Assistant Director, OPHD).

Homer Renk (chronic hepatitis C infection) was in an isolation room. He later died.

Dr. Simon Wu (Chief of Pathology) did the autopsy on Homer.

Then on to King Dewey's Castle of Tattoos (New Orleans, LA.) to meet with obese Dewey Alonzo Duarte (50+, aka King Dewey, former US Army, Vietnam).

Betty Jo Miller (aka B.J., nurse) was also stuck by a needle used on Homer.

Kris (lead field investigator, hepatitis outbreak) & Ed's next stop Dr. George Schmidt office.

There had been the New Bern outbreak, & the Delta virus outbreak (hepatitis B) in Massachusetts.

What later happened to the Hepatitis laboratory wing (Building 2,) in Dekalb County?

Kris & Ed are now in Venezuela to meet with Coronado "Cory" Flint (f, former DEA).

Kris & Cory are now in the Santa Maria Mission hospital.

Would Kris & Cory survive?
What about Ed?
& what about LaDonna Fry & B.J. Miller?
Will an antidote for the outbreak be made?

A very awesome book cover, great font & writing style. A very well written clandestine government bureaucratic book. It was very easy for me to read/follow from start/finish & never a dull moment. There were no grammar/typo errors, nor any repetitive or out of line sequence sentences. Lots of exciting scenarios, with several twists/turns & a huge set of unique characters to keep track of. This could also make another great clandestine government bureaucratic movie, or a mini TV series. To be continued? A very easy rating of 5 stars.

Kris Jensen is a very believable and likable character who also has a great sense of humor and an amazing sense of compassion and tenacity of purpose. The action keeps you wanting to read just one more page. I can't wait for Dr. Lettau to finish another episode!

Scary-Realistic, A Solid Thriller

I enjoyed this medical thriller, and found the premise frightening and realistic. I loved the way the author interwove real life examples and included his professional expertise to give this story a gripping urgency. I would have liked (and expected) more emotional resonance in the characters, particularly from the main character. She seemed to simply accept the fact she would die--no tears, no gut-wrenching denial, no shock--only a "just the facts" self-diagnosis. Almost a "whoops, oh well..." Huh? That was the only wrong note in the story, but as the book progressed, the character did begin to reveal a more emotive vulnerability including a terrific resiliency to overcome the inevitable. Still a solid story and I look forward to future thrillers from this talented author.

yay giveaways!

So this was a hard one to rate for me. I think it boiled down to issues of execution. The plot itself was my type of thing, and sometimes the writing was as good as the tale. But then there were the other times. I'd flip from thinking "total four star read!" to "ugh, I guess I can be generous and give it two." So I decided three was a fair representation of my overall experience, and I probably would recommend it.

I guess sharing the issues would help. It's mostly intrigue/thriller, which I like. Then the author would squeeze in these inspiration moments that just didn't fit with the pacing and tone. Well, not all of them. There were a couple that worked...which just made the rest MORE annoying. Ummmm... I think the author got too technical and then seemed to backpedal and over explain. There was a tease of conspiracy that ALMOST worked, so close so close, but then left me vaguely dissatisfied (more than once actually). But at least it wasn't complete thwarted potential?

Okay, I checked out the author and the overly technical slash info dump stuff makes more sense now. Also, this appears to be a first novel. I will stand by my rating, but now I'm interested in reading more. I want to see how he develops.

Eldon Farrell says

I really enjoyed reading this medical thriller—for a first novel, *Yellow Death* is superb. Alex Lettau has created in Kris Jensen a well-developed character who is intelligent, driven, spunky, and yes, even a little funny. As a reader you have no problem rooting for her as she maneuvers her way through this story. Move aside Temperance Brennan, there's a new leading lady of medical mystery on the way!

Without giving anything away (I hate spoilers in reviews) I'll just say that the book moves along at a nice clip and is filled with detailed medical information delivered for the most part in an engaging manner. I did become lost in the terminology in a few spots but nothing severe enough to hamper my enjoyment of the plot.

Aside from the medical aspects of the book, the author interwove a high level conspiracy that I felt was carried off rather well. There were a couple of moments within the book that stretched believability for me, but as they were very well written I still found them enjoyable.

Overall I would've rated this 4.5 stars if the capability was there but since it isn't, and it's not quite a 5 in my opinion, I'll settle at four stars. Well done Dr. Lettau...now hurry up with the next Kris Jensen adventure!
