Annoying and dumb right to the last sentence!

This was my most favorite out of the three in the second novella collection in the Endgame trilogy because it features the previous Players of the different lines.

We see how the Zero Line managed to execute their plan (to persuade first the Players into not playing, or kill them).

It was an intense novella packed with action scenes and lots of death (and I mean a lot) and that ending was unexpected.

This novella collection gives background to the Zero Line which I think will appear in the third book, Rules of the Game.

I didn't like the last book at all... so bloody and meaningless..

Yet , look again, it's 1972.... and this one set in Munich.... talk about bloody and meaningless...

The series is really brilliant.

Reap was the final Zero Line Chronicles novella. Mike, Kat and the gang are trying to convince the Players not to participate in Endgame, but the Players are not easy to convince. They are forced to kill the players who don't believe them, and Zero Line experiences many casualties. What Zero Line doesn't realize is that this was all for nothing - killing the current players just means new players will rise to take their place forever until the real Calling.

I really enjoyed Reap, and it was pretty heartbreaking to see that these characters lost their lives trying to do good in the world without realizing that they were fighting a losing battle. I'm really excited to see how Rules of the Game turns out.
