I read this book as an introduction to teaching practices for my graduate program. This class was in partner with an education theory class where we read Slavin's 10th ed. of Educational Psychology. In light of reading two very similar books, Slavin was much better written and organized, while Borich's text often left me questioning why I was reading the material.

While the reading flows fairly easily, this text seemed like it was rushed to the market by Pearson. There are typos throughout the book and the side bars are only used to promote supplementary material. This was disgusting to me. Rather than pull important vocabulary from the text and highlight in the side columns, or point out certification topics that may come up on the Praxis (both practices modeled in Slavin's text), the text highlighted videos and other electronic resources that were not accessible with the purchase of this text. For the \$160 invested in this text, I would hope to have access to all the resources associated with the book. However, these materials were only available for an additional \$80. Absurd.

Generally, I would say skip this book altogether and use Slavin's text for future classes or a refresher for people already in the education field.

A great resource for the beginning teacher- I learned a great deal about the basics of the theory of education coming from a different educational background than teacher education. I only wish that I had decided to purchase this book instead of merely renting it so that I can refer back to it when I begin my first year of teaching. Of course, it's not a thrilling read but one should expect that going in reading a textbook.
