Sabrina may seem like an extraordinary young girl; unlike many children her age. She's someone you want to be like, even though it doesn't always feel safe to be different. Children want to feel normalcy in their life - whatever this means to them - so they seldom welcome change or relate to anything that seems different from how they view their world. As children recognize and communicate deep-seated feelings and emotions they begin to look beyond appearances, embrace people and situations around them with acceptance and compassion, and become an example of inspiration and light - open and available to "listen through the fog" of their life; dissipating fear and allowing them to transition change smoothly through the imaginary bridge between illusion and reality.

### **Dana Smith says**

I like the concepts the author is trying to teach children, but it is a little too confusing for younger children. I have read it with my 7-year-old several times, & tried the activities, but it was too confusing for him.
