## Global Physical Climatology Dennis L. Hartmann

*Global Physical Climatology, Second Edition*, provides an introduction to the science of climate and climate change that spans the atmosphere, ocean, and land surface, and the interactions among them.

It begins with a basic introduction to the climate system, and then introduces the physics of the climate system, including the principles and processes that determine the structure and climate of the atmosphere, ocean, and land surface. More advanced topics apply the basic knowledge introduced to understanding natural variability of the climate in both the present and past, the sensitivity of climate to external forcing, explanations for the ice ages, and the science of human-induced climate change. The physical principles and computer models necessary for understanding past climate and predicting future climate are also discussed.

This book is recommended for upper division undergraduates and graduates in meteorology, atmospheric science, oceanography, and other environmental fields. It is also suitable for students with a background of at least one year of college physics and calculus as well as researchers in academia, government (military, NOAA, NWS), and policymakers.

Covers a great range of information on the Earth's climate system and how it works

Includes a basic introduction to the physics of climate suitable for physical science majors

Provides an overview of the central themes of modern research on climate change suitable for beginning researchers

Incorporates problem sets to aid learning

Offers an authoritative, clearly written, well-illustrated text with up-to-date data and modeling results

## Global Physical Climatology Details

Date : Published January 2nd 2016 by Elsevier Science (first published January 1st 1994)

ISBN : 9780123285317

Author : Dennis L. Hartmann

Format : Hardcover 498 pages

Genre : Reference
