This book was given to me by my first love around the time when we were both figuring out that it just wasn't gonna work out, and the pain was searing and pervasive. For me, even thinking about this book sends me right back into that time in my life, and so I'm not really able to judge this book on its own merit.

Whoopy says

Not a totally romantic novel but a story that starts you thinking.

I first read this book in 1994 and still have the 10th anniversary edition I bought at the time. It is a very well written story about two young women who meet at college and become lovers. As the title suggests they make different choices when they leave college. The story is set in the 1970s. One of them lives her life as an 'out and proud' lesbian while the other opts for the safety of marriage. The first part is about their relationship at college and the second part about what happens when they meet fifteen years later. Both have unresolved issues to deal with.

This really is an excellent book and I would recommend it to anyone to read.

I rarely put a book down in the middle, and stop reading it. However, this was the one. The characters did not have believable distinct personalities, and I found myself not interested by their foolish mistakes or typical problems. Good luck if you try to read this one. The author can clearly write, but the character development is just completely absent.

Thanks Bambi. ;)

I have had this book on my bookshelves for what has seemed an eternity. I tried reading it long ago and I recently attempted another sitting. I wanted to like the story. There was just something painfully tedious

about it. The book failed to draw me in and hold me. I forced myself to pick it up a few times before finally deciding to let the book go.

lesbian romance in which the main characters become psychologists... i mean how could i not like it?
