## **From Reader Review Space Mission Engineering: The New Smad for online ebook**

### **Karen Grothe says**

I was reading and working from the new SMAD for the Space Mission Systems Engineering course I took through UCLA Extension. Some nice new information on small spacecraft and reducing the cost of space programs, but the book seems overly long.

---

### **Jason says**

#### **Section 1.3.1: Getting To Space Is Really Hard**

"To get to Low Earth Orbit, we need to go up about 200km, turn left, and accelerate to 7.8 km/s."?

Some of SMAD is collegial and funny; some is dry as toast and written for engineers, some is in the middle. All of it is interesting but it is a little erratic.
